plusserver

Private Registry

Your managed private registry service

Your challenges

The use of container images or Helm charts enables the automation of many processes in software development and DevOps environments. However, control and security of the images can be a challenge. A private registry addresses these issues, but requires independent implementation, updates, backups, etc., which ties up resources in the DevOps team.

Our solution

The plusserver Private Registry Service is an easy and affordable way to store, manage, and share your container images and Helm charts. plusserver takes care of the setup, operation, and availability. Take the pressure off your IT team and make working with Kubernetes even easier!

Your benefits at a glance:

+ Managed service (setup, operation, availability)
+ Cross-registry synchronization
+ Automated deletion of unused images
+ Certified data centers in Germany
+ Transparent billing (pay-as-you-go)
+ German and English-speaking 24/7 support
+ Direct ordering via CloudHub

See product documentation

Billing by consumption (monthly):

2 vCPU, 4 GB RAM: 0.11 € per hour

4 vCPU, 8 GB RAM: 0.22 € per hour

Storage: 7.15 € per 50 GB

plusserver
Sovereign Cloud. Made & managed in Germany.

plusserver is the cloud provider with the digitalization platform „Made in Germany." We support medium-sized enterprises and large corporations step by step through their IT modernization. In addition to our cloud product portfolio based on our own certified German data centers, 24/7 support in German or English, and comprehensive managed services, we are defined by our commitment to data sovereignty and interoperability. plusserver was the first company to productively implement an open-source cloud with „pluscloud open," which is based entirely on the Sovereign Cloud Stack and thus meets the highest data protection standards.
